| <b>Matriculation,</b> <i>Vikas Senior Model School</i>  |             |
| <b>Percentage: 78</b>   | 2016 - 2017 |

### PROJECTS

**Learning Management System Backend**  
**React js || Node js || Express js || MongoDB**

- Developed the backend for the Learning Management System using Node.js and the Express.js framework.
- Created APIs for courses, including functionalities such as creating courses, retrieving all courses, accessing lectures by CourseID, removing courses, updating courses, and adding lectures to courses by ID.
- Additionally, I created APIs for user-related actions such as retrieving profiles, logging in, logging out, registering, resetting passwords, recovering forgotten passwords, changing passwords, and updating profiles.
- Utilized MongoDB as the database, and for testing the APIs, I employed the Postman tool.

**Social Media App**  
**React js || Node js || Express js || SQL**

- The project should incorporate features like User Registration, User Profile, Post Creation, Likes and Comments, and support for both Dark and Light Themes. The user interface should be intuitive, with clear labels and easy navigation aided by intuitive icons.
- The primary objective of this project is to enable users to create and publish posts containing text or images. SQL was used as the database, and the Postman tool was utilized for API testing.

**TODO-List**  
**React js || Node js || Express js || MongoDB**

- The project should include features such as adding new tasks, editing existing tasks, marking tasks as completed, and Removing tasks after Completion.
- The main purpose of the Todo list project is to create a tool that allows users to keep track of their tasks and to-do items in an organized way
